Multiplexed imaging: omics with spatial context

Depicted: Imaging mass cytometry (IMC)

Similar methods: CODEX, MIBI, IBEX, ...

The spatial landscape of lung pathology in COVID-19

Cohort of 23 individuals with various lung infections:

- “Early” COVID-19 (succumbed 1-5 days after onset)
- “Late” COVID-19 (>30 days after disease onset)
- ARDS (influenza, bacterial pneumonia, sepsis)

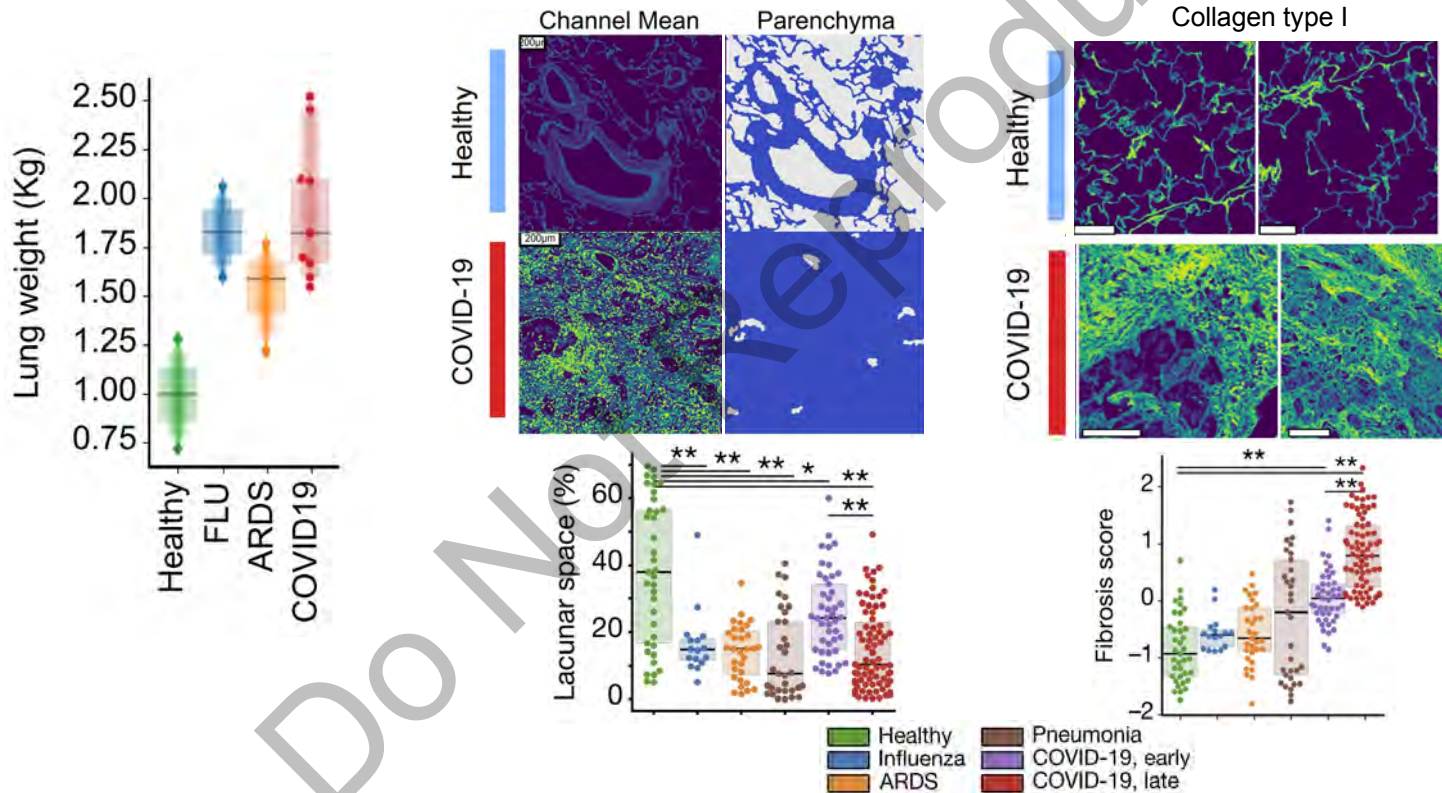

Multiplexed imaging of lung tissue:

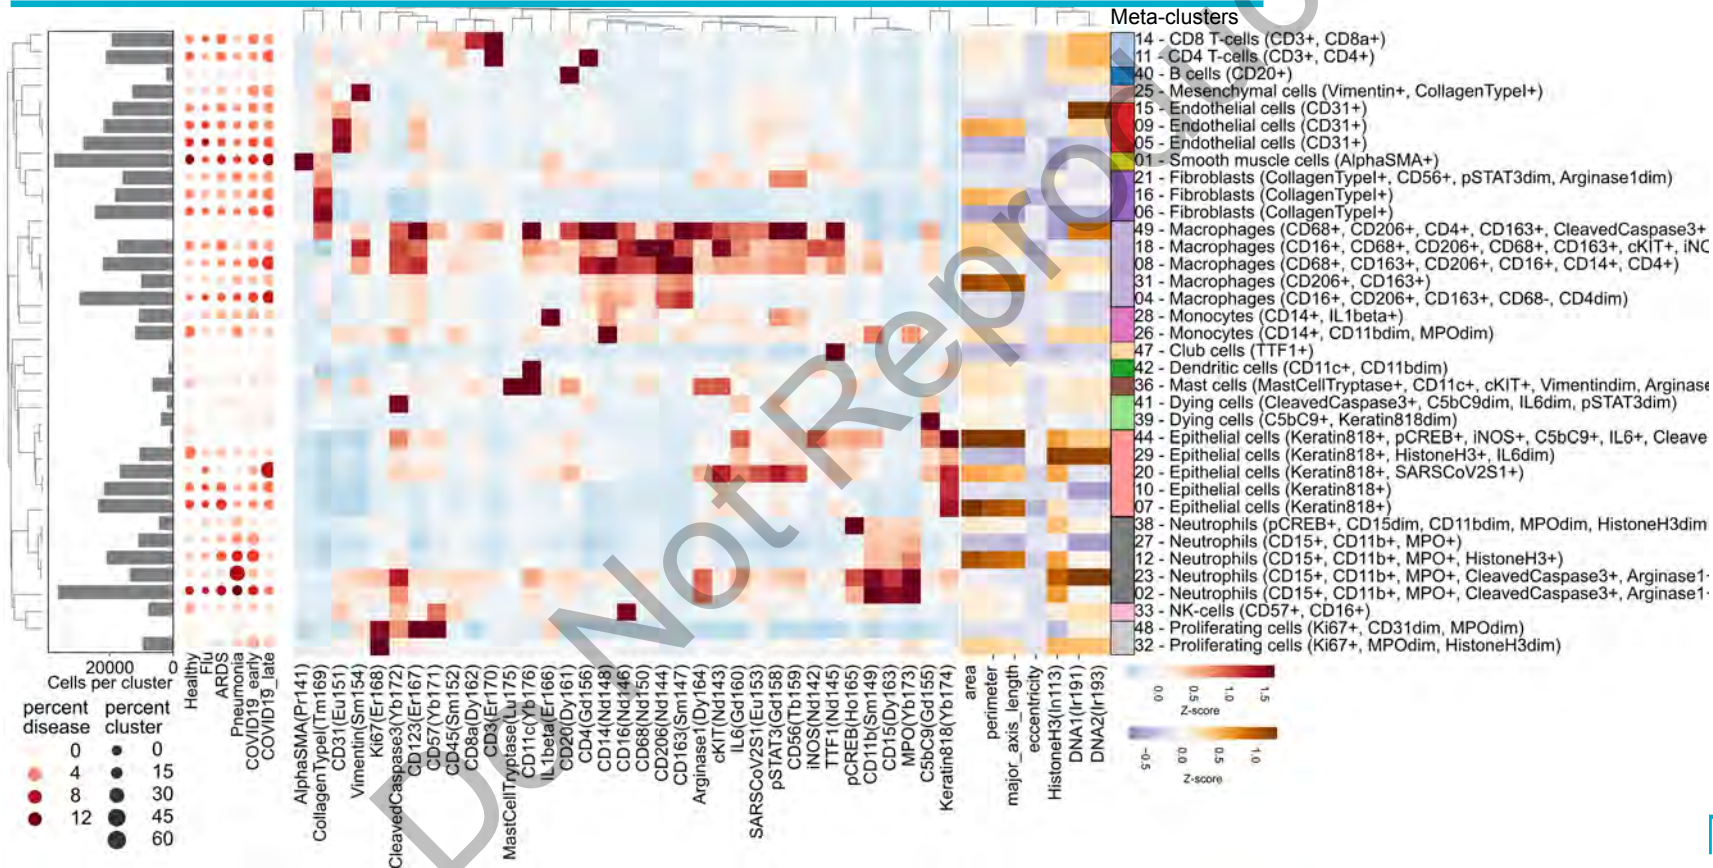

- 37 marker antibody panel for imaging mass cytometry
- 247 images, ~1mm² each

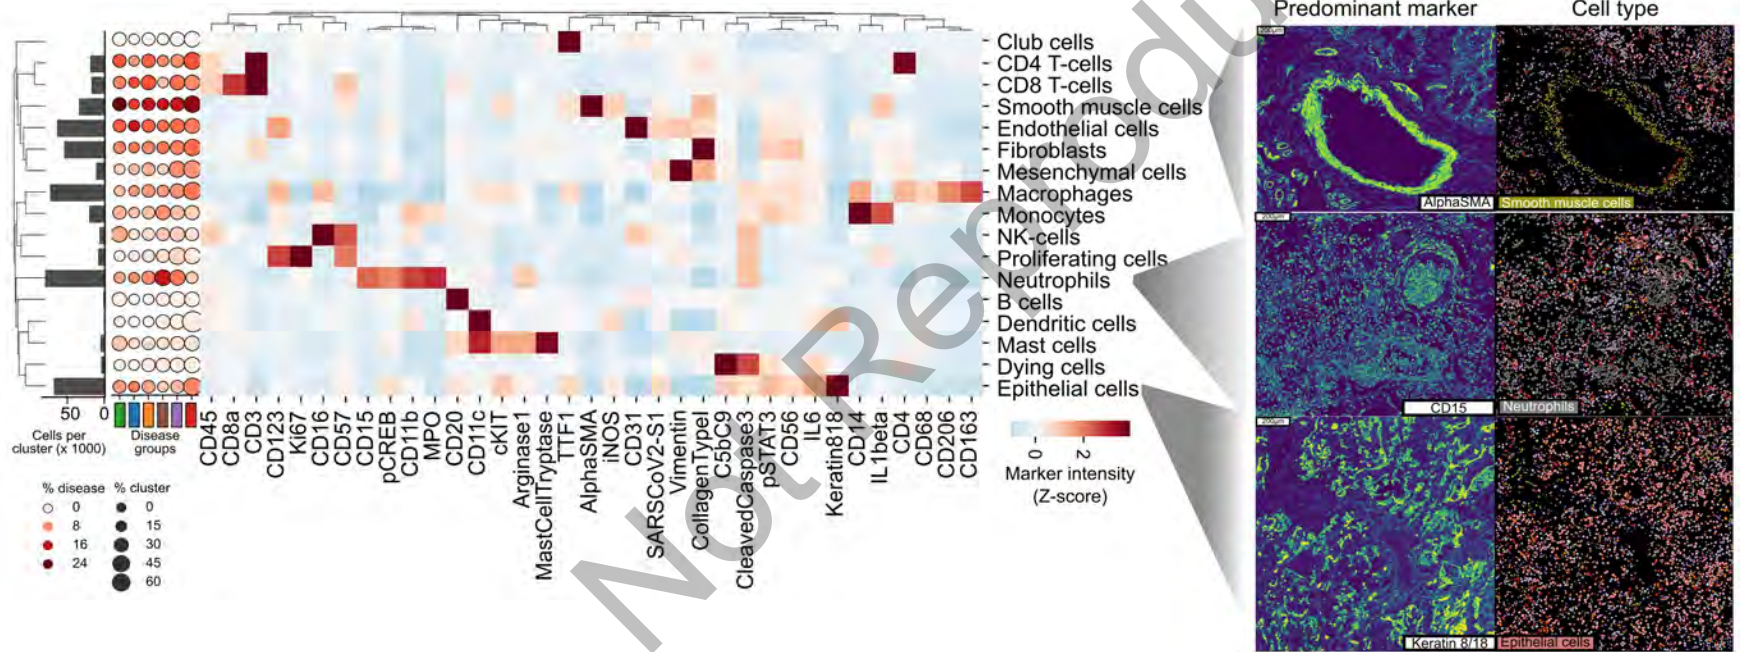

Quantification of lung pathology at micro-anatomical level

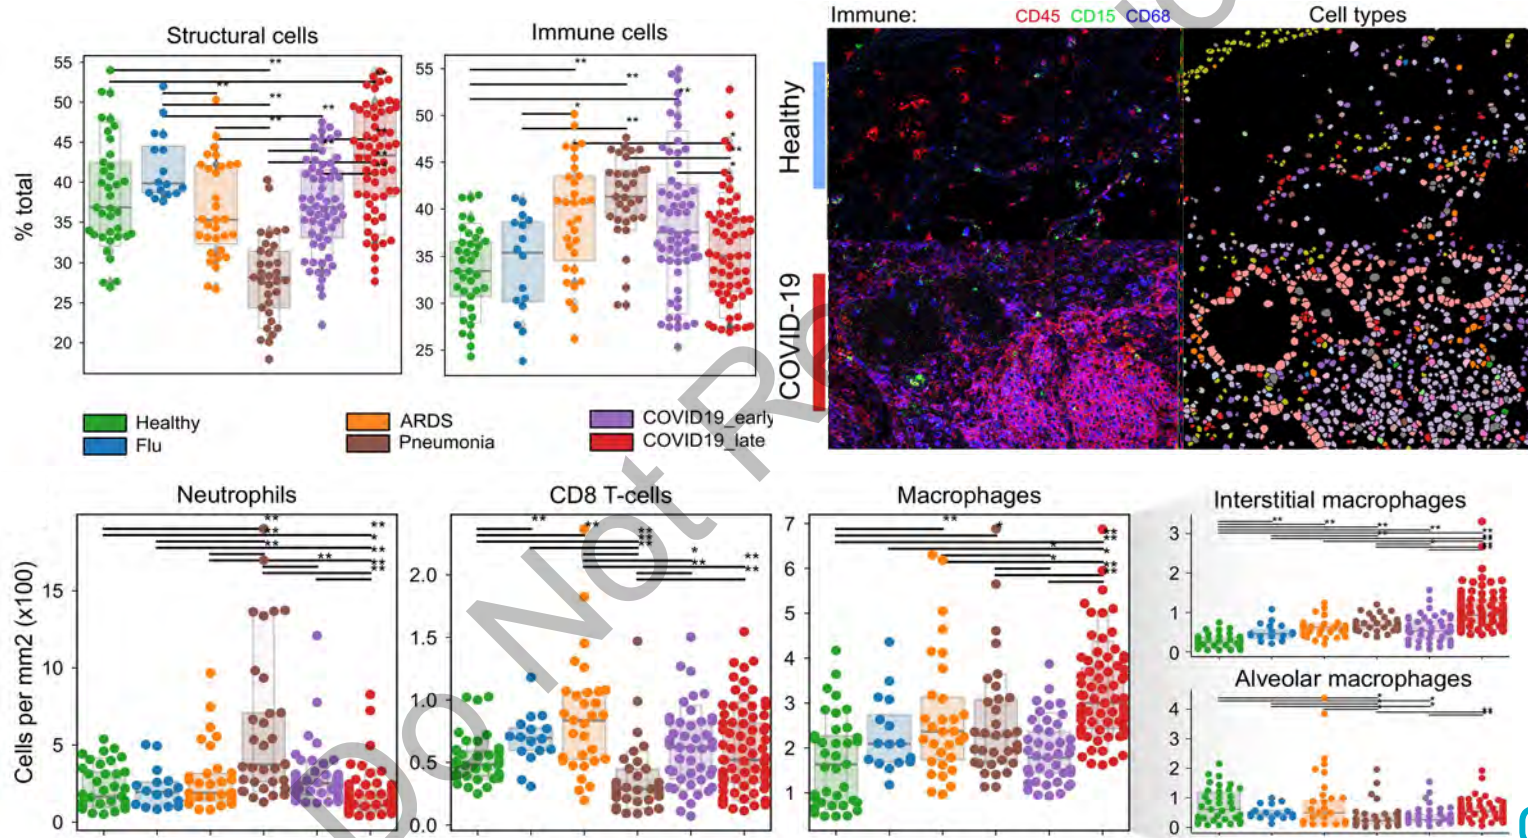

Cellular quantification and phenotyping

Cellular quantification and phenotyping

Infiltration of interstitial macrophages in severe COVID-19

Validation with immunohistochemistry

Hematoxylin segmentation

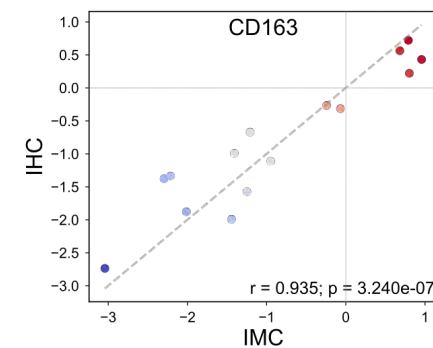

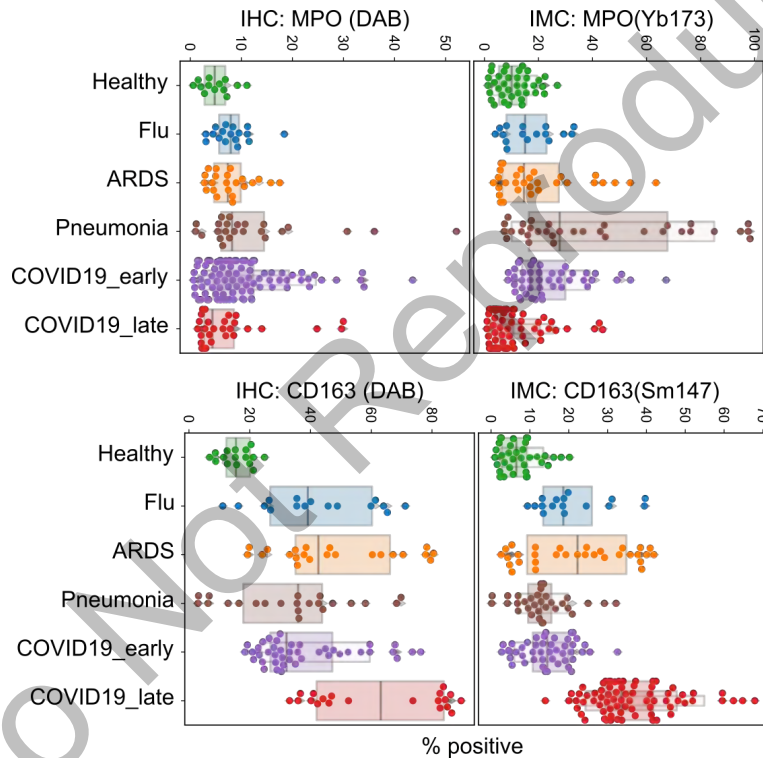

Color decomposition and quantification

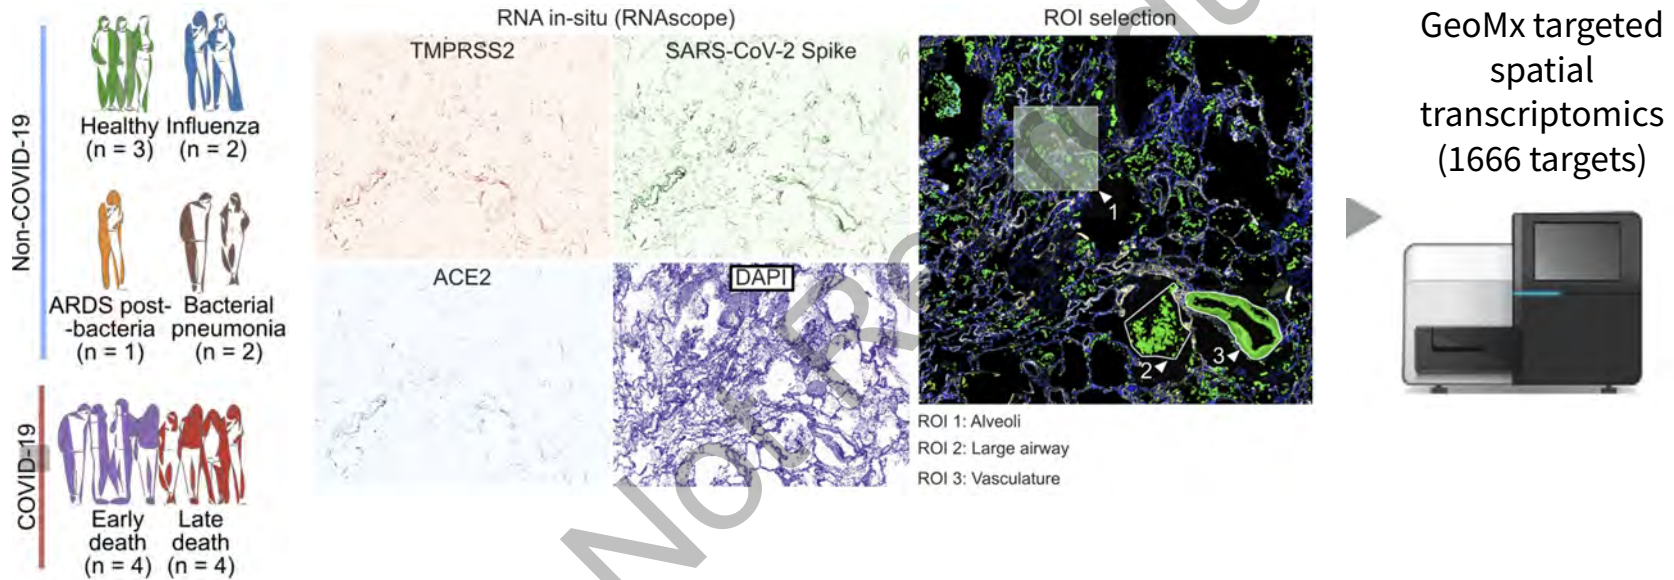

Good agreement of immunohistochemistry and multiplexed imaging

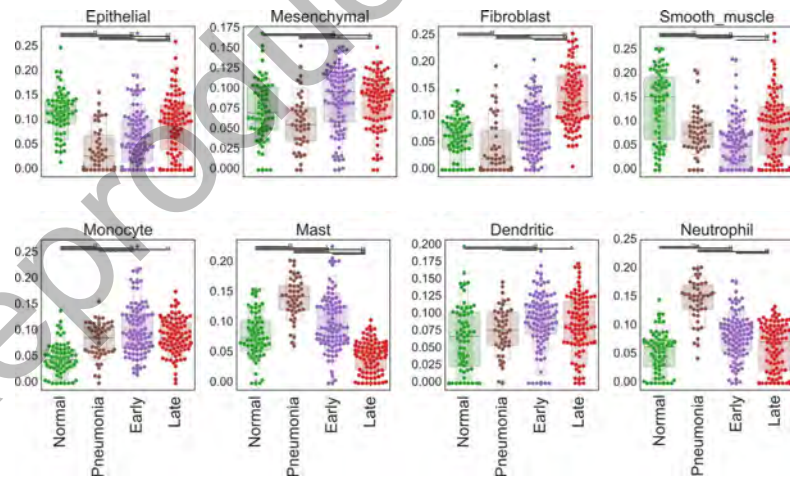

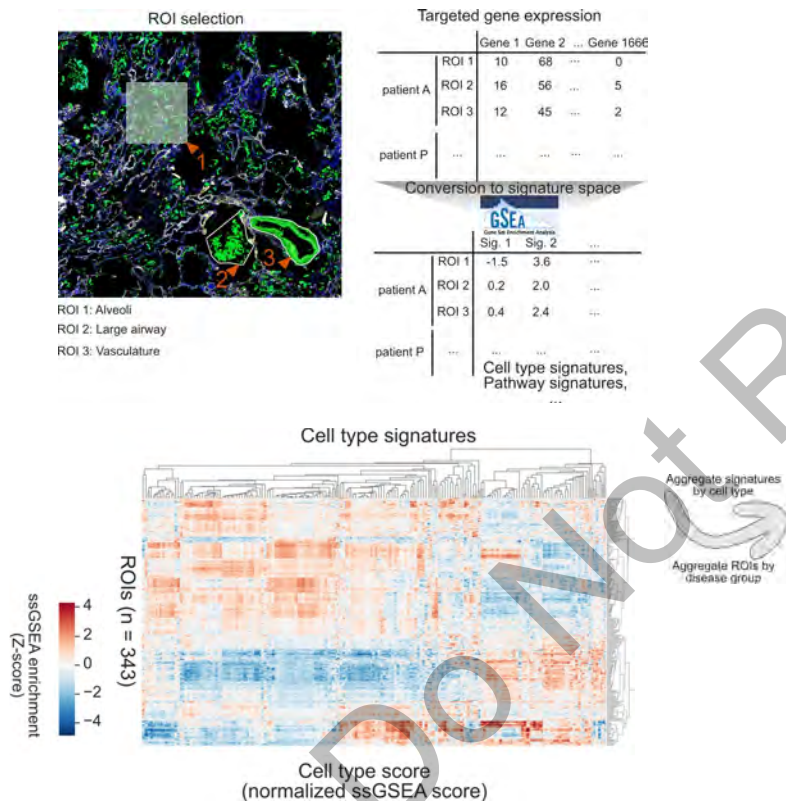

Diaminobenzidine discretization

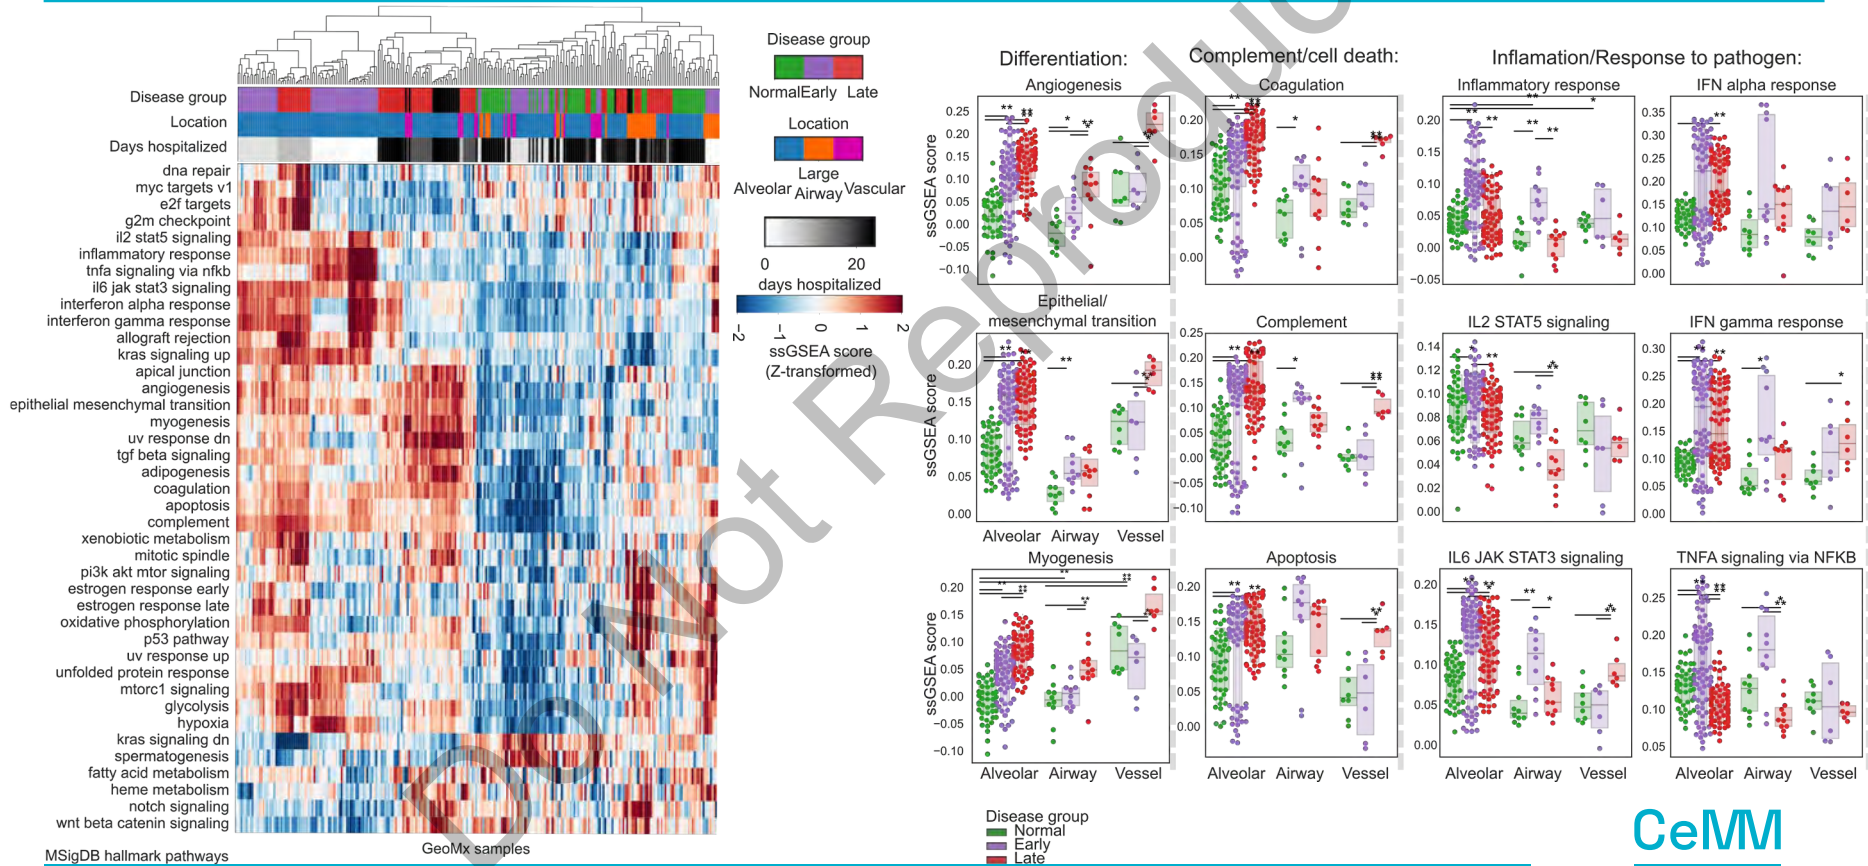

Targeted spatial transcriptomics of COVID-19

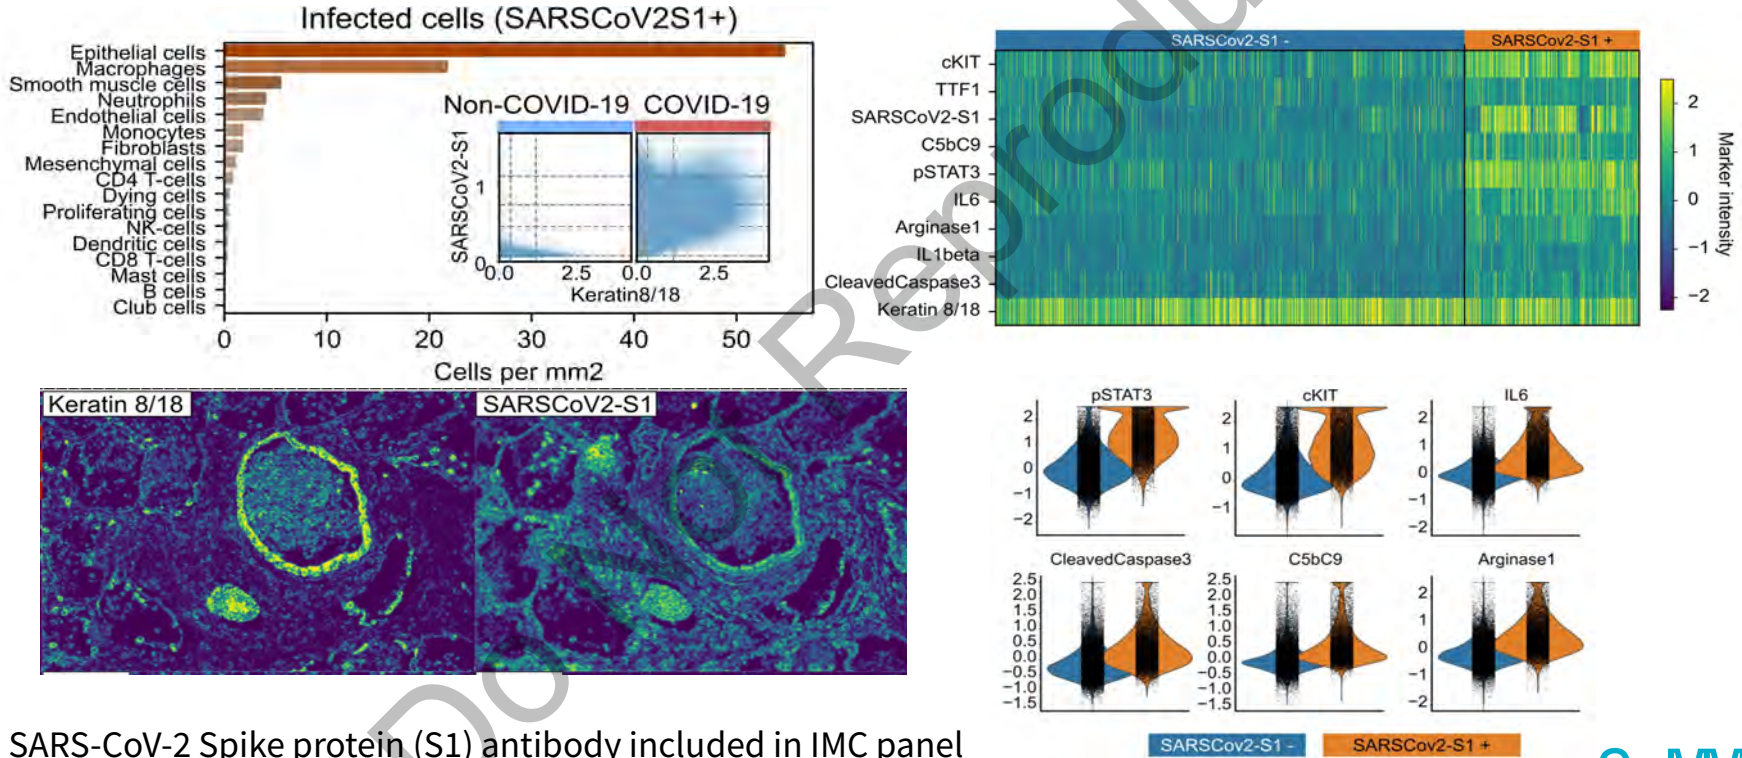

Good agreement of spatial transcriptomics and multiplexed imaging

Complementary information between spatial transcriptomics and multiplexed imaging

Detection and characterization of infected cells

SARS-CoV-2 Spike protein (S1) antibody included in IMC panel

Infiltration of interstitial macrophages during fibrosis

DNA KRT8/18 S

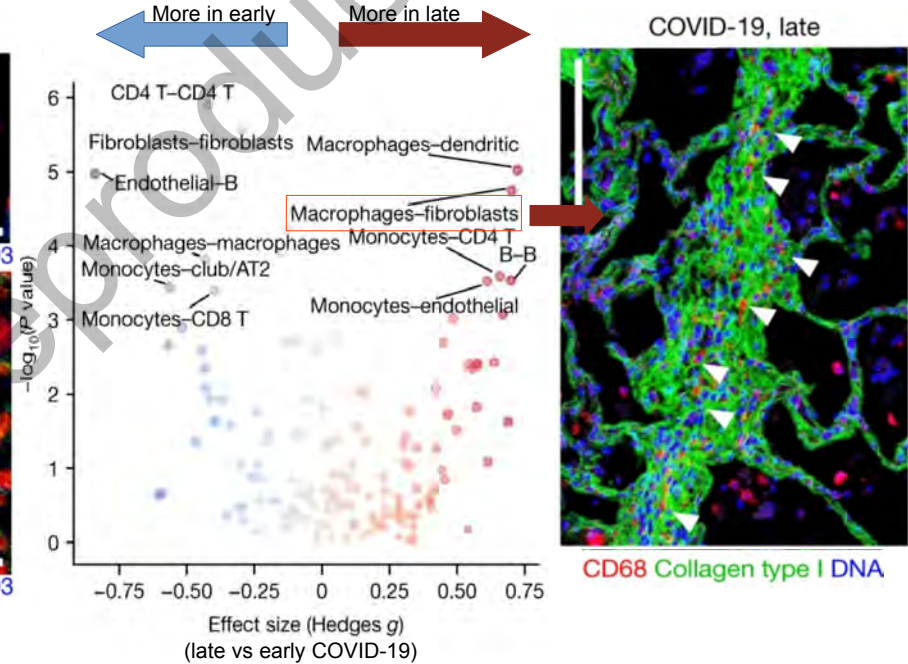

DNA S x KRT8/18 CD68 + CD15 + CD3

CD68 CD15 CD3

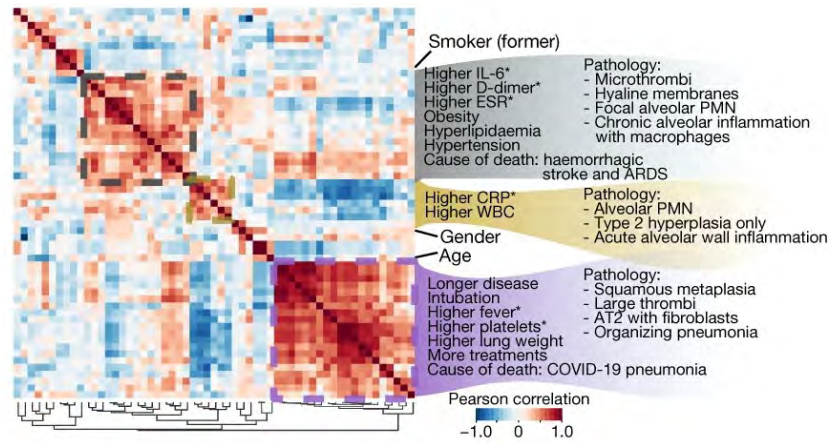

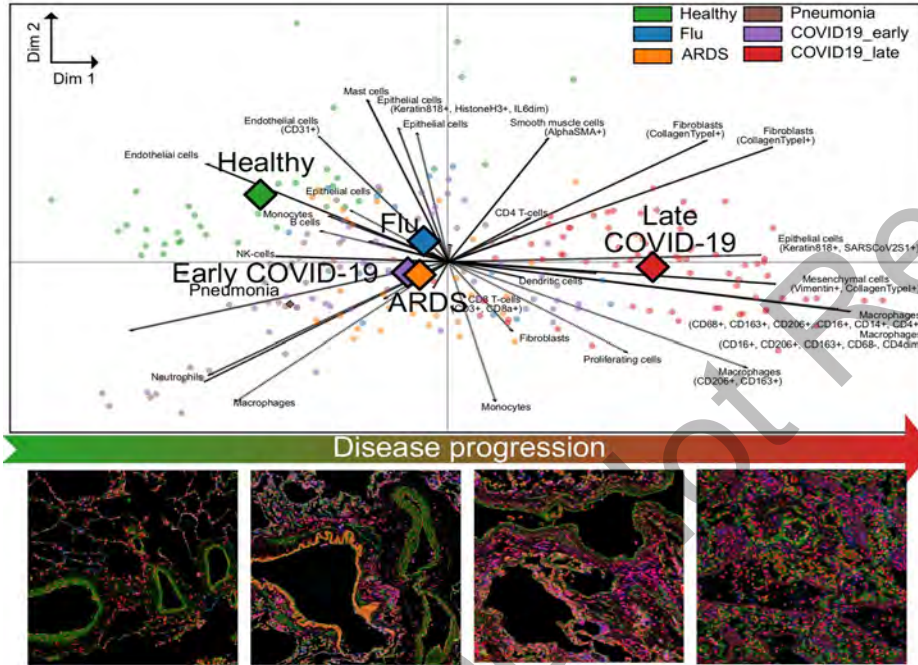

DNA S x CD68 CD15 + CD3

Cleav. CASP3 C5b-C9 IL-1B

Augmenting spatial atlases with clinical interpretability

Persistent dysfunction of post-acute COVID-19 lung

PASC/post-acute COVID-19 patients followed up to 359 days with incidental death

Persistent lung structural derangement

non-COVID: Healthy (green), UIP/IPF (blue)
COVID Acute: early (orange), late (red)
Post-acute: positive (pink), negative (purple)

Persistent SARS-CoV-2 and AT-2 cell senescence

non-COVID: Healthy (green), UIP/IPF (blue)
COVID Acute: early (orange), late (red)
Post-acute: positive (pink), negative (purple)

The cross anatomical scale impact of aging

20 years old

102 years old

Ludvík Chybík, photographed by Jan Langer, "Faces of Century" project

Young mouse lung

Older mouse lung

Young skin (28 years old)

Older skin (69 years old)

Young fibroblasts

Aged fibroblasts

Microanatomical manifestations of aging

The aging process and age-related diseases manifest at the micro-anatomical tissue level, progressively resulting in loss of tissue integrity and function.

We are interested in:

- Spatial distribution of cells and cell states and their organization in healthy and aging tissue.
- Using tissue images/features to predict biological age and risk of disease onset.

Unappreciated biomedical goldmine: histopathological images

Scanned whole slide images Pathology reports

Subject ID:	1XYZ-1234
Age:	67
Sex:	Female
Tissue:	Spleen
Scanned whole slide: 2 pieces; vascular congestion; capsule present	

1-10Gb, compressed file

> 25,000 slides in total for 40 tissues

Whole slide tiling

2,000 to 10,000 tiles per slide

Tissue tile

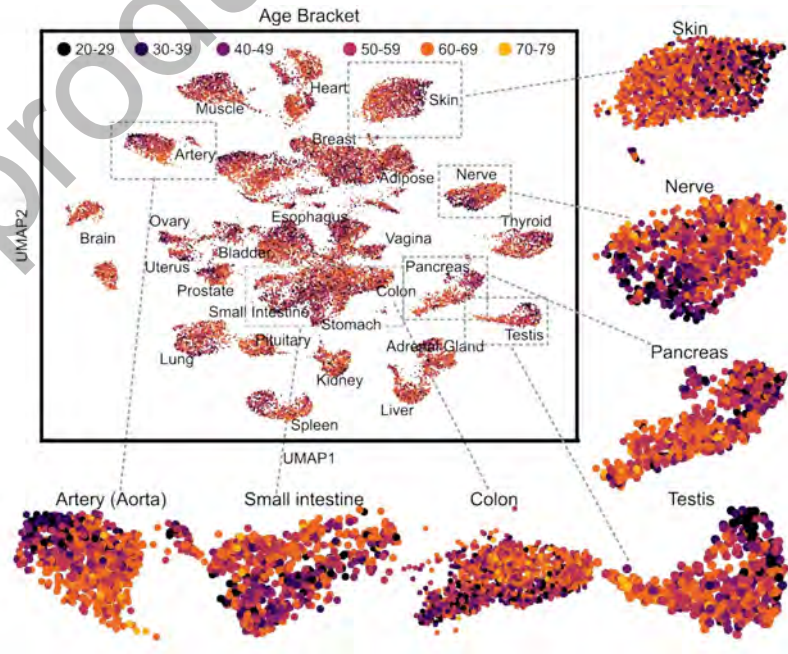

>160 million tiles in total

Comprehensive representation of H&E images using deep learning models

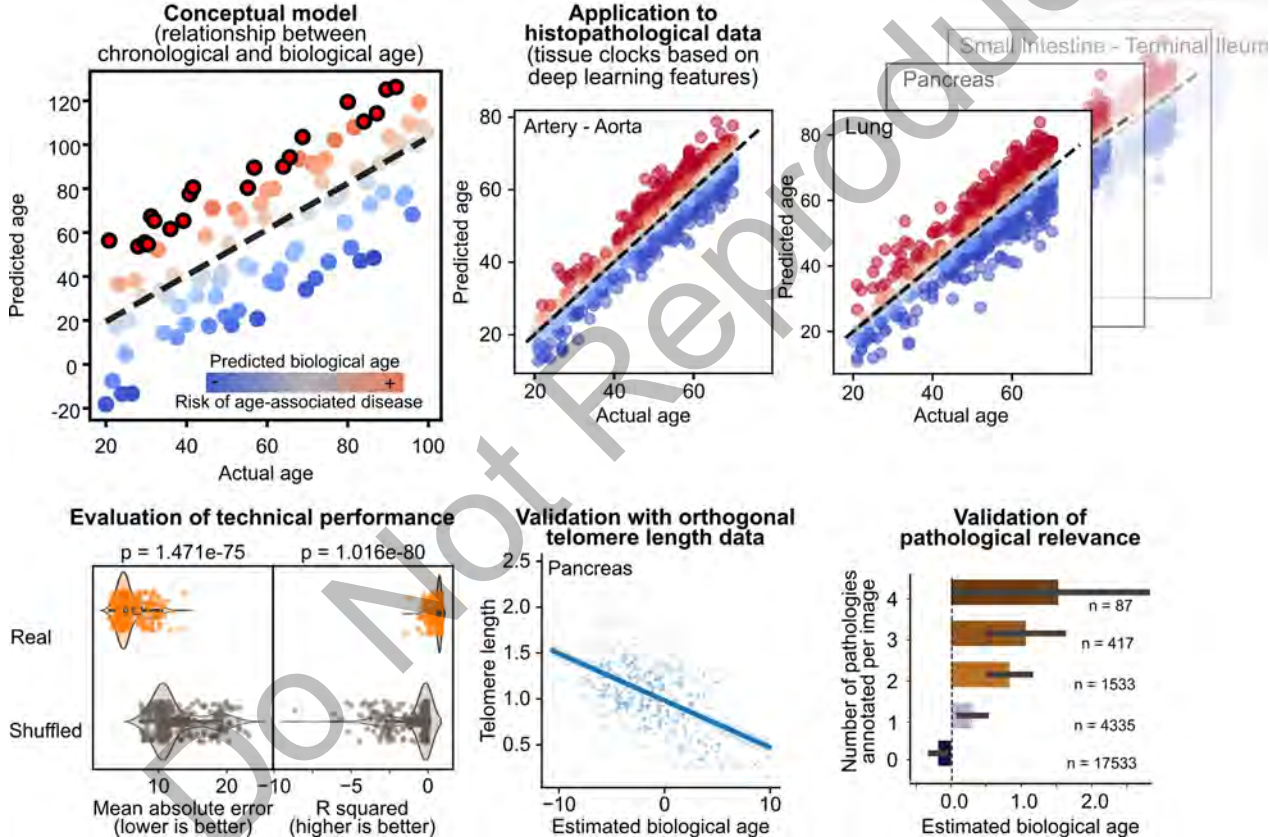

Fine-tuning of vision models for tissue classification

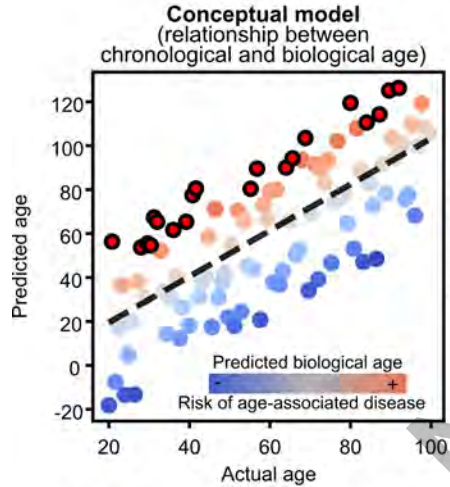

Extraction of tissue relevant features for downstream analysis

Predictors of biological aging from tissue images

Cross-tissue/organ comparison of rates of aging

Ranking tissues by rate of accelerated aging

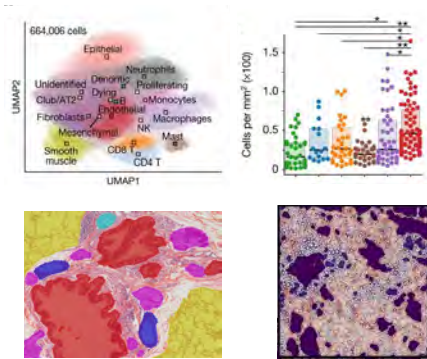

Identification of organ-specific vs systemic aging
(linked to e.g. behaviour, viral exposure)

Rendeiro lab: spatial and computational biology of aging

Quantification of cell phenotypes, cell communication and tissue organization

Detection of age-related tissue organization changes

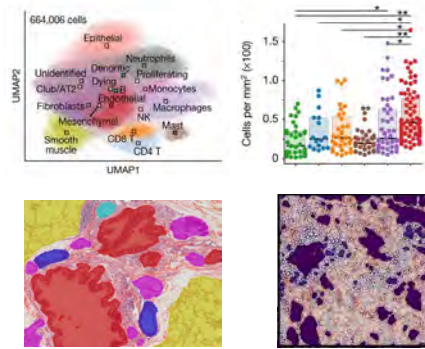

Understanding relationship between loss of tissue integrity and disease onset

Rendeiro lab: spatial and computational biology of aging

Quantification of cell phenotypes, cell communication and tissue organization

Detection of age-related tissue organization changes

Understanding relationship between loss of tissue integrity and disease onset

Perhaps with you?

Organ-scale gradients of tissue organization

Integration of/translation to in vivo/non-invasive imaging
